

Data Privacy & Confidentiality Training

Facilitator Guide

Audience: Staff, volunteers, interns, and contractors who handle personal data about students, participants, customers, or colleagues, in any organization

Duration: 45 minutes

Format: Facilitated group session, in person or virtual (8 to 25 participants, working in small groups of 3 to 5)

Facilitator preparation: About 30 minutes (complete the customization box, confirm the privacy contact, print materials, review the scenario answer key)

At a glance: A complete facilitator guide for a 45-minute data privacy and confidentiality session, built to work in schools, education companies, and corporate learning teams.

- **What is inside:** timed session plan with scripts, a customization table, five core habits, a three-question sharing decision test, six scenario cards with answer key, a seven-question knowledge check, an evaluation plan, participant and facilitator FAQs, and a one-page handout.
- **Skills shown:** instructional design, plain-language writing, assessment design, and adaptable training materials.

Design notes: Why the session is built this way.

- **Learners:** staff, volunteers, interns, and contractors in any setting, including people new to the organization, who handle other people's information as part of their roles and are not privacy specialists.
- **Problem:** privacy training often boils down to "never share," which people quickly learn to ignore because sharing is a normal part of work. Many people also simply do not know what is okay to share and what is not.
- **Approach:** teach one decision test (need, minimum, channel) instead of a long rule list, so learners can handle situations the training never mentioned.
- **Practice:** scenarios deliberately include cases where sharing is correct and cases where it is not, so learners practice both saying yes and saying no.
- **Adaptability:** a customization table at the front lets any organization insert its own contacts, channels, retention rules, and success criteria, and each section points back to it.
- **Assessment:** every learning objective is checked by at least one knowledge check question and one scenario activity prompt (see the alignment table in Evaluating the Session).

Learning Objectives

By the end of this session, participants will be able to:

1. Explain why data privacy matters in their work
2. Identify what counts as personal or sensitive information
3. Apply their organization's data handling procedures, including deciding when sharing information is appropriate
4. Recognize and report a potential data privacy incident

Before You Facilitate: Customize This Guide

This session teaches good practice that applies in most organizations. Before delivering it, fill in the table below so participants hear their own organization's rules, not generic ones. Confirm the privacy contact before the session. Do not assume or assign this person yourself: ask HR, your manager, or the IT or compliance team who is officially responsible, and write down their name and contact details. Each row shows an example from three different settings: 1. a school, 2. a corporate learning and development (L&D) team, and 3. an education company.

Customization Table: Your Organization's Details

Item to complete	Your organization's answer	Examples: 1. School, 2. Corporate L&D, 3. Education company
Types of personal data handled		1. School: Student names, grades, medical notes. 2. Corporate L&D: Learner names, manager emails, assessment scores. 3. Education company: Account emails, birthdates, payment status.
Approved places to store and share data		1. School: School information system or secure school drive, not personal email. 2. Corporate L&D: Company learning management system or shared drive, not personal messaging apps. 3. Education company: Secure support ticketing tool or CRM, not personal cloud storage.
Examples of legitimate need-to-know		1. School: A teacher needs a student's emergency contact for a field trip. 2. Corporate L&D: A trainer needs a learner's manager email to send a completion reminder. 3. Education company: A support agent needs a student's account email to fix a login problem.
Privacy contact: who is officially responsible for privacy and incidents, and how and how soon to report an incident to them		1. School: Data protection lead or principal's office, the same day. 2. Corporate L&D: IT security or privacy officer through the incident form, within 24 hours. 3. Education company: Security team through the urgent ticket queue, immediately.

Item to complete	Your organization's answer	Examples: 1. School, 2. Corporate L&D, 3. Education company
Retention and disposal rule		1. School: Shred sign-in sheets once attendance is recorded; keep records per the school retention schedule. 2. Corporate L&D: If you are an outside trainer, the client usually owns the learner data, so follow the client's contract or data agreement and return or delete the data when the engagement ends. 3. Education company: Follow the company retention policy, which sets how long each type of record is needed, often with shorter periods for student records, especially minors.
Relevant law or policy (optional)		1. School: The school's student data protection policy and applicable education privacy law. 2. Corporate L&D: The client's data protection policy and the privacy law where the learners work. 3. Education company: The company privacy policy, privacy law in each country where students live, and any extra rules for children's data.
Success criteria and certificate (if any)		1. School: Attendance is recorded on the staff training log; no quiz score is required. 2. Corporate L&D: Completion is tracked in the learning management system and requires passing the knowledge check at the set score. 3. Education company: A certificate is issued after attending the full session and passing the knowledge check; retakes are allowed.

Note: This is general training, not legal advice. Laws and policies differ by country and organization. When this guide and your organization's own policy differ, the organization's policy applies.

Session Outline

Time	Topic	Method	Objective
0:00–0:05	Welcome And Session Objectives	Brief introduction	All
0:05–0:15	Why Data Privacy Matters	Facilitated discussion	1, 2
0:15–0:30	Data Handling Procedures	Walkthrough with example scenarios	2, 3, 4
0:30–0:40	Practice: Spot The Risk	Small group activity	2, 3, 4
0:40–0:45	Knowledge Check And Wrap-Up	Individual quiz and Q&A	1, 2, 3, 4

Section 1: Welcome And Session Objectives (0:00–0:05)

Purpose: Set a calm, practical tone and agree on ground rules before any examples are shared.

Steps

1. Greet participants and state the purpose in one sentence (1 minute).
2. Show the four learning objectives and read them aloud (1 minute).
3. Agree on ground rules (2 minutes). Ask participants to use fictional or anonymous examples only and not to name real people or describe real cases during the session. Remind them that questions are welcome.
4. Explain the format: short discussions, a worked example, a small group activity, and a brief quiz that is for learning unless your organization sets a passing score (1 minute).

Say: "Today is about handling other people's information with care while still getting our work done. Sharing information is a normal part of every job. We will practice telling the difference between sharing that helps and sharing that harms."

Section 2: Why Data Privacy Matters (0:05–0:15)

Purpose: Help participants connect privacy to real people and to their own daily work (Objectives 1 and 2).

Steps

1. **Opening question (3 minutes).** Ask: "What information do we collect from the people we work with, and what would happen if it ended up in the wrong hands?" Take answers from two or three participants before moving on.
2. **Key points (4 minutes).** Cover the points below in plain language, avoiding legal or technical jargon.
3. **Small group check-in (3 minutes).** Ask each small group to name one piece of personal data they handle in their role and who else in the organization might ask for it.

Key points to cover

- **Personal data** is any information that could identify a specific person, such as name, contact details, photos, ID numbers, grades or performance records, or location.
- **Sensitive data** (health status, disability or accommodation needs, protection or safeguarding cases, biometric data, financial details) needs extra care and should only be shared on a need-to-know basis.
- A privacy breach can put real people at risk, including harm to their safety, finances, or reputation, not just create paperwork for the organization.
- Good privacy practice is not about refusing to share. It is about sharing the right information, with the right people, for the right reason.

Sample responses to the opening question

What we collect: names, phone numbers and emails, home addresses, ID or account numbers, photos, grades or assessment results, attendance, health or accommodation needs, payment details.

What could happen: identity theft or fraud, unwanted contact or safety risks, embarrassment or discrimination, loss of trust in the organization, and legal or financial penalties for the organization.

Short case you can use: A tutoring program emails a sign-up list with home addresses to the wrong parent by mistake. Two families receive unwanted contact, and one stops attending. Ask: Who was affected, and how? The harm falls on the families first, not on the program.

Facilitator tip: If a participant says "we have never had a problem," ask what the organization would do tomorrow if a spreadsheet went to the wrong person. This leads naturally into Section 3.

Customize: Name the types of personal data your organization actually handles, from the customization table, when you take participants' answers.

Section 3: Data Handling Procedures (0:15–0:30)

Purpose: Give participants five practical habits, a simple test for deciding when to share, and clear steps for reporting an incident (Objectives 3 and 4).

Part A: Five core habits (6 minutes)

Habit	What it looks like	Example
1. Collect only what you need	Before asking for a piece of information, ask whether the task truly requires it.	A workshop sign-in sheet needs a name and email, not a date of birth.
2. Share on a need-to-know basis	Share when someone needs the information to do their job, and share only the part they need.	A trainer needs a learner's email to send a reminder, but not that learner's assessment history.
3. Use approved channels	Store and send personal data only through systems your organization approves.	Use the shared drive or secure ticketing tool, not a personal messaging app.
4. Protect it where it lives	Lock screens, use strong passwords, keep paper out of sight, and keep files in approved locations.	Do not leave a printed learner list on a shared printer or desk.
5. Keep it only as long as needed	Follow your organization's retention rule and dispose of data securely.	Shred printed sign-in sheets once attendance is recorded.

Customize: State your organization's approved places to store and share data and its retention rule from the customization table, so participants hear their own rules.

Part B: The sharing decision test (5 minutes)

Introduce three questions to ask whenever someone requests personal information. Write them on a slide or flip chart:

- Need:** Does this person need the information to do their role?
- Minimum:** Am I sharing only what they need, and nothing more?
- Channel:** Am I using an approved way to share it?

Walk through the three worked examples below, asking participants to apply the test before you reveal the decision.

Request	Need?	Minimum?	Channel?	Decision
A teacher asks the school office for a student's emergency contact before a field trip.	Yes, supervising the trip.	Only that student's emergency contact.	School information system or a trip list returned afterward.	Appropriate to share.
A trainer asks HR for a learner's manager email to send a completion reminder.	Yes, sending the reminder.	Email address only, not other HR data.	HR system or approved email.	Appropriate to share.
A colleague who is curious asks to read a participant's accommodation notes.	No job-related reason.	Not applicable.	Not applicable.	Decline politely. Point them to whoever owns the record if they have a work reason.

Say: "The answer is rarely a flat yes or no. A teacher, a trainer, or a manager often does need personal information. We just check need, minimum, and channel every time."

Part C: When something goes wrong (4 minutes)

What counts as a potential incident: information sent to the wrong person, a lost or stolen device or paper file, someone accessing records without permission, personal data posted somewhere public, or a reply to a suspicious message that asked for personal data.

Teach the four steps:

1. **Stop.** Do not forward, delete, or try to fix it quietly. Keep any evidence, such as the email.
2. **Report immediately** to the privacy contact named in the customization table, even if you are not sure it is serious.
3. **Share the facts:** what happened, when, whose information, and who may have received it.
4. **Follow instructions.** The focus is on protecting people, not blaming individuals. Do not investigate on your own.

Facilitator tip: Stress that reporting early is the single most helpful thing a person can do. Many incidents become serious because they were hidden, not because they happened.

Section 4: Practice: Spot The Risk (0:30–0:40)

Purpose: Let participants apply the habits, the sharing test, and the reporting steps to realistic situations (Objectives 2, 3, and 4).

Materials: one set of the six scenario cards below per group, printed and cut apart, and the facilitator answer key.

Steps

1. **Set up (1 minute).** Form groups of 3 to 5 and give each group a set of cards. Assign two or three cards per group (all six if time allows).

2. **Discuss (5 minutes).** For each card, the group answers: Is there a risk? Who could be harmed, and how? Which habit or test applies? What should the person do next? Ask groups to jot down one sentence per card.
3. **Debrief (4 minutes).** Invite one group per card to share its answer, then reveal the key. Highlight that Card 4 is a case where sharing is appropriate, so participants practice both saying yes and saying no.

Customize: Replace or add scenarios that match your organization's settings and data types. Keep at least one case where sharing is appropriate, one where it is not, and one incident.

Scenario cards (print and cut apart)

Card	Setting	Situation
1	School front office	A parent calls and asks for the home phone number of another family so the two can arrange a carpool.
2	Corporate learning and development	A trainer exports a learner results spreadsheet that includes names, manager emails, and accommodation notes, and sends it from a personal email account to an outside vendor who is building a report.
3	Education company support team	A support agent pastes a screenshot of a student's account page, showing full name, email, and birthdate, into a team chat channel with 200 members to ask a quick question.
4	School trip planning	A teacher leading a field trip asks the school office for the information needed to look after the 24 students on the trip: emergency contacts, dietary restrictions, allergies, health concerns, and disability or accommodation needs. The teacher does not ask for grades or other records.
5	Remote working	A staff member working from a cafe steps away to order a coffee, leaving a laptop open to a screen of learner records.
6	Any workplace	A teammate mentions that last week they emailed an attendance spreadsheet to the wrong person with the same first name, then deleted the sent message and hoped it was fine.

Facilitator answer key

Card	Risk or issue	Strong response
1	Sharing a third party's contact details without their consent. The parent has no work-related need.	Do not share. Offer to pass the parent's number to the other family, or invite the other family to make contact if they wish.
2	Unnecessary sensitive data (accommodation notes) and an unapproved channel (personal email).	Remove the accommodation notes and any other unneeded fields, and send the file through the approved vendor channel under the organization's data sharing arrangements.
3	Over-broad audience and more detail than needed.	Delete the post if possible and report it if it is a breach. In future, mask personal details and ask the specialist directly or through the ticketing tool.

Card	Risk or issue	Strong response
4	Appropriate. The teacher has a clear need, because trip safety depends on knowing each student's emergency contact and any dietary, allergy, health, or accommodation needs. The request is limited to the 24 students and to trip-relevant information. Although this is sensitive data, need-to-know applies.	Share a trip-specific learner profile for those 24 students only: emergency contacts plus relevant dietary, allergy, health, and accommodation information. Leave out grades, behavior records, and anything unrelated to the trip. Use the school system or a trip list kept by the teacher, then return or destroy it after the trip.
5	Screen exposure of personal data in a public place.	Lock the screen whenever stepping away, use a privacy screen, and work from a private space when handling learner records.
6	An unreported incident. Deleting the sent message does not undo the exposure.	Report to the privacy contact now, with the facts. Support the teammate without blame. Early reporting still helps even a week later.

Section 5: Knowledge Check And Wrap-Up (0:40–0:45)

Purpose: Confirm understanding of all four objectives and invite a personal commitment.

Steps

1. **Quiz (3 minutes).** Participants answer the seven questions individually on the handout or on screen. Review answers aloud and ask for a show of hands on each; the quiz is for learning unless your organization sets a passing score.
2. **Wrap-up (2 minutes).** Ask each participant to write down one habit they will use this week, then invite two or three volunteers to share. Point to the quick reference handout and the privacy contact.

Sample commitments if participants are stuck: Prompt with "What will you do, and when?" and offer examples. Make vague answers like "be more careful" specific.

- Lock my screen every time I step away.
- Send only the columns a person needs.
- Use the approved channel instead of my personal messaging app.
- Mask names and birthdates in screenshots.
- Delete old copies of exported lists.
- Save the privacy contact's details in my phone.
- Report a mistake the same day.

Customize: Before the quiz begins, tell participants how success is determined (for example, attendance only, finishing the activity, or passing the knowledge check), using the success criteria row of the customization table.

If you are running short on time: Complete questions 1 to 6 in the session and assign question 7 as a follow-up reflection.

Knowledge check questions and answer key

Question 1 (Objective 2). Which of the following is considered sensitive personal data?

- (a) A participant's first name
- (b) A participant's health status
- (c) The program location
- (d) A company's public office address

Answer: (b). *Health information can cause serious harm if exposed, so it needs extra care and need-to-know sharing.*

Question 2 (Objective 3). A colleague from another team asks you for a participant's phone number. What is the best response?

- (a) Share it, since you work for the same organization.
- (b) Decline, because contact details can never be shared.
- (c) Ask what they need it for, and share it only if it is needed for their work and your organization's procedures allow it.
- (d) Share it, as long as they promise not to pass it on.

Answer: (c). *Sharing is often appropriate when it is job-related. The test is need-to-know and an approved purpose, not whether the person is a colleague or senior.*

Question 3 (Objective 3). Which is an approved way to share a participant list with a teammate who needs it for their work?

- (a) A personal messaging app
- (b) A shared folder your organization approves, with access limited to the team
- (c) A printout left on a shared desk
- (d) Your personal email account

Answer: (b). *Approved channels with limited access protect the data and give the organization control over it.*

Question 4 (Objective 1). True or false: A privacy breach mainly creates extra paperwork for the organization.

Answer: False. *A breach can put people at real risk, such as fraud, unwanted contact, discrimination, or harm to their safety, and it damages trust.*

Question 5 (Objective 4). You realize you sent a spreadsheet of participant details to the wrong recipient. What should you do first?

- (a) Wait to see whether anyone notices
- (b) Delete the sent message and say nothing
- (c) Report it right away to the privacy contact, even if you are unsure how serious it is
- (d) Ask a colleague to quietly fix it

Answer: (c). *Prompt reporting lets the organization limit the harm. Steps such as asking the recipient to delete the file should follow the organization's instructions.*

Question 6 (Objective 1). A spreadsheet with participants' home addresses is emailed to the wrong person. Which is the most important reason this matters?

- (a) It might create paperwork for the organization
- (b) Someone could use the addresses to contact or locate people who never agreed to it
- (c) The organization might be embarrassed
- (d) The file may be too large to store

Answer: (b). *The main harm is to the people whose information was exposed, such as unwanted contact or risks to their safety. Organizational consequences follow from that harm.*

Question 7 (Objectives 2 and 3, short answer). Name one piece of personal data you handle in your role and one habit you will use to protect it.

Sample answers:

"Learner email addresses; I will share them only through the approved drive."

"Student health notes; I will share them only with staff who need them."

"Customer birthdates; I will mask them in screenshots."

Evaluating the Session

Assessment alignment

Each learning objective is checked in two ways, so you can see at a glance that nothing is taught without being practiced and assessed.

Objective	Knowledge check	Spot the Risk activity
1. Explain why data privacy matters	Questions 4 and 6	Discussion prompt "Who could be harmed, and how?" on every card
2. Identify personal and sensitive information	Questions 1 and 7	Cards 2, 3, and 4 (spotting sensitive data)
3. Apply data handling procedures, including when sharing is appropriate	Questions 2, 3, and 7	Cards 1, 2, 3, 4, and 5
4. Recognize and report a potential incident	Question 5	Card 6 (and Card 3 if the post is a breach)

Measuring whether the session worked

Use these simple measures to find out whether the training worked and what to improve. Adjust them to what your organization already tracks.

What to measure	How	When
Reaction: Did participants find it clear and useful?	Three-question exit survey (below).	End of session, or sent right afterward so it does not use session time.
Learning: Can participants apply the concepts?	Knowledge check results and the Spot the Risk debrief. Note which questions or cards groups struggled with.	During the session.
Behavior: Are people using the habits at work?	Short follow-up check with participants or their managers: Have you used the three questions? Can you name the privacy contact? Optionally, review how many incidents and near misses were reported.	About 30 days later.
Improvement: What should change?	Review the results, update scenarios and the customization table, and note common questions to add to the Anticipated Questions section.	After each delivery.

Note: If reports of incidents or near misses go up after the training, that is usually a good sign. It means people recognize problems and feel safe reporting them.

Sample exit survey

Ask participants to rate the first two statements from 1 (strongly disagree) to 5 (strongly agree), then answer the third in their own words.

1. I can explain when it is appropriate to share personal information at work.
2. I know who to contact and what to do if something goes wrong.
3. What is one thing that would make this session more useful?

Sample 30-day follow-up check

Send these questions by email about 30 days after the session, to participants or to their managers. Use the answers to update the scenarios, the customization table, and the Anticipated Questions section.

1. In the past month, have you used the three questions (need, minimum, channel) before sharing personal information? Please give an example.
2. Can you name your privacy contact and say how and how soon to report an incident?
3. Has any situation come up that the training did not prepare you for?

Anticipated Questions

Use these two tables to prepare. The first covers questions participants are likely to ask during the session. The second covers questions you may have as a facilitator while preparing or delivering it. Questions are numbered (P1 to P7 for participants, F1 to F9 for facilitators) so you can refer back to them. Rehearse the answers aloud, and add your organization's specific answers in the customization table.

A. Questions from participants

#	Participant question	Suggested response
P1	Isn't it fine to share this if we all work for the same organization?	Working for the same organization is not enough on its own. Sharing is appropriate when the person needs the information for their role. Use the three questions: need, minimum, channel.
P2	What if my manager tells me to share something I think I should not?	Ask what the information is needed for, and offer to share only the part that is needed. If you are still unsure, check with the privacy contact. Asking is not insubordination.
P3	Can I use my personal phone or email for work if my organization has not given me a company device, or the approved system is slow?	Only if your organization's policy allows it. Many organizations do not issue phones, so check the policy or ask the privacy contact before using a personal device or account. Where it is allowed, use approved apps and accounts only, keep a screen lock on, and do not save personal data on the device. Never use personal messaging apps for personal data. If the approved system is slow, report it so it can be fixed.
P4	Does this apply to more than recorded information, including things I just know from my work?	Yes. Personal information is protected whether it is written down, stored in a system, or only in your head. Do not discuss identifiable people in hallways, group chats, or on social media.

#	Participant question	Suggested response
P5	What happens if I report an incident and it turns out to be nothing?	Nothing negative. Reporting in good faith is always the right call. Many serious incidents were made worse by delay, which is why early reporting matters.
P6	How is this different from the law in my country?	This session covers good practice that applies in most places. Laws differ, and your organization's policy and local law take priority. The privacy contact can explain what applies to your role.
P7	Can I keep a copy of the participant list for my own records?	Only if your role requires it and the retention rule allows it. Otherwise use the approved system as the single source, and delete any working copies when finished.

B. Questions from facilitators, answered by the guide's author

#	Facilitator question	Answer
F1	Do I need to be a privacy or legal expert to deliver this?	No. The session teaches practical habits and a decision test. Before delivering, complete the customization table with your organization's real rules. If a question goes beyond the guide, say so and refer it to the privacy contact after the session.
F2	What if my organization has no formal privacy policy or privacy contact?	Do not choose someone yourself. Find out who is officially responsible by asking HR, your manager, or the IT or compliance team, and confirm their name and contact details before the session. If no one holds the role, ask your manager or HR to assign one, and wait for that decision. Do not deliver the training until you can tell participants exactly who to report to, because the reporting steps have nowhere to go without a named contact.

#	Facilitator question	Answer
F3	Can I shorten or lengthen the session?	Yes, but first check what success requires (see F6 and F9). If a certificate or passing score is required: • Protect the knowledge check and the core content in Section 3. • Cut time from the discussion and activity sections instead. Example 30-minute version with a quiz: • Section 1: 2 minutes • Section 2: 5 minutes • Section 3: 12 minutes • Section 4: 6 minutes, using Cards 1, 4, and 6 only • Section 5: 5 minutes If no quiz or passing score is required: • Assign the knowledge check as a follow-up and give the time to Section 4. 60-minute version: • Use all six cards, add your own examples, and take open questions at the end.
F4	Can I swap in my own scenarios?	Yes, and it is encouraged. Keep one scenario where sharing is appropriate, one where it is not, and one incident. Use fictional or anonymized details only.
F5	What if a participant describes a real incident during the session?	Pause kindly, thank them for raising it, and take it offline right away to the privacy contact. Do not discuss identifying details with the group.
F6	Is the knowledge check graded? Should I record scores?	It depends on your organization. By default it is a learning check: review answers together and record nothing. If your organization issues a certificate or needs proof of completion, confirm in advance how success is determined (attending the full session, finishing the activity, or passing the knowledge check), what the passing score is, whether retakes are allowed, and where records are kept. Tell participants the rules at the start of the session.
F7	My group includes people from several countries or organizations. What changes?	Keep the guide's principles, and tell participants that local law and each organization's policy may differ. Ask groups to apply their own organization's rules in Section 4.
F8	Can I use this for students or minors as the audience?	The structure works, but simplify the language and use age-appropriate scenarios. Check your organization's policy on training minors.

#	Facilitator question	Answer
F9	Does completing this guide give participants a certificate or meet a compliance requirement?	Not by itself. This guide is general training and does not certify anyone or satisfy any legal or contractual requirement. Whether a certificate is issued, and what counts as success (attendance only or passing the knowledge check), is decided by your organization. Confirm this before the session, and follow your organization's compliance process.

Materials Needed

Materials checklist

- Slides or flip chart covering the objectives, key points, five habits, the sharing decision test, and the four incident steps (plain-language version available on request)
- Completed Customization Table (in Before You Facilitate), with your organization's contacts and rules
- One printed set of the six scenario cards per group, plus the facilitator answer key
- Knowledge check copies or a screen-sharing version with the answer key for you
- Participant quick reference handout (last page), one per person
- Sign-in sheet that collects only names, as a model of collecting the minimum
- Exit survey (paper or online) with the three sample questions
- Timer, pens, and flip chart or whiteboard

In person and virtual delivery

- **In person:** Seat participants in small groups from the start so the Section 4 activity begins quickly.
- **Virtual:** Use breakout rooms for Section 2 and Section 4, share the scenario cards in the chat or on screen, and use a poll or the chat for quiz answers.

Accessibility notes

- Materials are available in plain-language and translated formats on request.
- For virtual delivery, enable live captions and share the slides or handout in advance so participants can follow in their own language.
- Read scenario cards aloud for the whole room, allow extra time on request, and offer a digital option so no one has to write by hand.

Troubleshooting common situations

If this happens	Try this
A participant starts describing a real case with identifying details.	Pause kindly, remind the group of the ground rule, and invite them to restate it as a fictional example.
Someone says "we share this all the time."	Apply the sharing decision test together. Frequent practice is not the same as an approved purpose.
Participants feel the rules are too strict.	Acknowledge that sharing is a normal part of work, and show that the test is about purpose, minimum, and channel, not about saying no.
Discussion is quiet, especially online.	Use pair discussions, the chat, or breakout rooms, and call on groups rather than individuals.
You are running behind.	Shorten the Section 2 discussion and move question 7 of the knowledge check to a follow-up.

Participant Handout: Quick Reference

Before you share personal information, ask three questions

1. **Need:** Does this person need it to do their role?
2. **Minimum:** Am I sharing only what they need?
3. **Channel:** Am I using an approved way to share it?

What counts as personal and sensitive data

- **Personal:** name, contact details, photos, ID or account numbers, grades or performance records, location.
- **Sensitive (extra care):** health status, disability or accommodation needs, protection or safeguarding cases, biometric data, financial details.

Five habits

- Collect only what you need.
- Share on a need-to-know basis.
- Use approved channels.
- Protect it where it lives: lock screens, secure files, keep paper out of sight.
- Keep it only as long as needed, then dispose of it securely.

If something goes wrong

1. **Stop.** Do not forward, delete, or fix it quietly.
2. **Report immediately** to the privacy contact below, even if you are unsure it is serious.
3. **Share the facts:** what, when, whose information, and who may have it.
4. **Follow instructions.** The goal is protecting people, not blaming anyone.

Privacy contact

Name: _____

Email: _____

Phone number: _____

How to report it (phone, email, or form): _____

How soon to report (for example, immediately or within 24 hours): _____

My commitment this week: _____

For example: lock my screen whenever I step away; send only the information someone needs; report a mistake the same day. Ask your facilitator for more examples.
